

Task 1

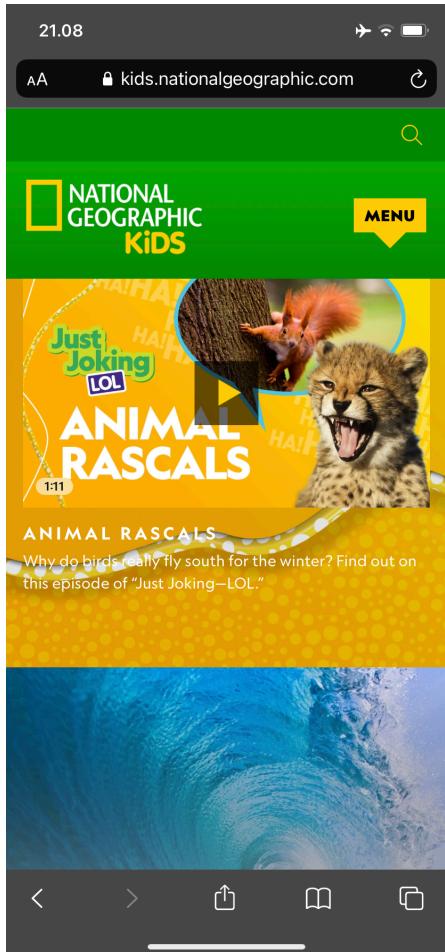

1. Nat Geo Kids (<https://kids.nationalgeographic.com/>)

I'm going to create an Interactive Kids Learning Support website. Nat Geo Kids seems to have similar features to the app I intend to implement.

I. Desktop Preview

II. Phone Preview

1. On the desktop, the type of navigation bar was header navigation. It's at the top of the page. As we resize our screen, the navigation bar will be responsive. The MENU icon in the top right will change to a kind of "hamburger" navigation bar. When we open it on our phone, it will look the same as when we resize our desktop screen.
2. The contents are trimmed along the page's edge. To move on to the next section, we should click a button. In addition, the buttons are white (bad visibility)

2. Study Portals (<https://studyportals.com/>)

I. Desktop Preview

The screenshot shows the desktop version of the studyportals.com website. At the top, there's a navigation bar with links for About, For Students, For Institutions, Careers, News & Events, Resources, and Contact. Below the navigation is a banner with the text "Education choice transparent, globally". It features two buttons: "Start course search" and "Promote your courses", followed by "I'm a student" and "I work in higher ed". A sidebar on the right contains a testimonial from Silvana K. Tafur Yasuda-Bakker, Director of Marketing, Demand Generation, and another from Mohamed Elzayadi, Recruitment Manager. The main content area includes a section titled "What our clients say" with logos for ESC Clermont, Cambridge Education Group, and Study West Virginia, each accompanied by a testimonial and a photo of a person.

II. Phone Preview

The screenshot shows the mobile version of the studyportals.com website. The top part is identical to the desktop version, with the navigation bar and the "Education choice transparent, globally" banner. The "What our clients say" section is also present. Below this, the main content area is simplified. The "Join our mission to make study choice transparent, globally." text is at the top, followed by the "Every year, we change the lives of millions of" text. At the bottom, there are five small icons: a left arrow, a right arrow, a square with a plus sign, a book icon, and a square icon.

1. The navigation bar was at the top of the site on the desktop. The navigation bar will become Hamburger navigation as we resize our screen. When we open it on our phone, it will look the same as when we resize the screen on our desktop.
2. The page content is divided into three sections (Why our clients say). If we resize our page, there will be two small buttons that you must click to see the other information. It cannot be swiped to the left. It must be clicked.
